Package 'sugar'

July 25, 2013

Type Package

Version 0.1-1

Date 2013-05-29

Title A collection of Python-esque data types

Author Greg Lamp and Austin Ogilvie

Maintainer Greg Lamp <greg@yhathq.com>

Depends R (>= 2.12.0)

Imports plyr, digest, methods

Suggests testthat (>= 0.2)

Description sugar provides Python-like data types (list and dict) in R

License FreeBSD

URL https://github.com/yhat/sugar

BugReports https://github.com/yhat/sugar/issues

Collate 'pydict.R' 'pylist.R' 'utils.r'

R topics documented:

---

as.character   *Turns a list into a character vector.*

Description

Generic function that calls the string method for a list.

Arguments

x	a list
...	named args

Examples

```
as.character(list.py(1, 2, 3, 4))
```

---

cos   *Calculates the cos of the items in a list*

Description

Generic function for caclulating the cos of the items in a list. If an item is not numeric an error occurs.

---

cumsum   *Calculates the cumsum of the items in a list*

Description

Generic function for caclulating the cumsum of the items in a list. If an item is not numeric an error occurs.

---

dict.py *Creates an instance of a dict*

Description

This is a wrapper function around the `pydict$new` that is a little more R friendly.

Usage

```
dict.py(...)
```

Arguments

...   a series of key/value pairs in the form `key=value`

Examples

```
(x <- dict.py("a"=1, "b"=2, "c"=3))
#{a: 1, b: 2, c: 3}
```

---

dict_repl *Function for representing hashed objects as strings*

Description

Purely visual.

Usage

```
dict_repl(object, obj_name)
```

Arguments

`object`	an arbitrary thing
`obj_name`	name of the variable as defined by the user (not currently being used)

---

encapsulate *Helper function for making character vectors have quotes around each item when printed to the console.*

Description

Helper function for making character vectors have quotes around each item when printed to the console.

Usage

```
encapsulate(values)
```

Arguments

`values`   a vector of values

---

hist   *Plots a histogram of the items of a list.*

Description

Generic function that plots a histogram of the items in a list.

---

is.dict.py   *Determines whether or not an object is an instance of a dictionary.*

Description

Determines the class of an object and checks to see if it's a dictionary.

Usage

```
is.dict.py(object)
```

Arguments

object   any object

Examples

```
x <- dict.py("a"=1)
is.dict.py(x)
#TRUE
x <- list(1, 2, 3, 4)
is.dict.py(x)
#FALSE
```

---

is.list.py   *Determines whether or not an object is an instance of a list*

Description

Determines the class of an object and checks to see if it's a list

Usage

```
is.list.py(object)
```

Arguments

object   any object

Examples

```
x <- list.py("a")
is.list.py(x)
#TRUE
x <- 1:10
is.dict.py(x)
#FALSE
```

---

lapply	*Wrapper around* lapply.

Description

Automatically invotes lapply on the items in the list.

---

length	*Function for getting the number of items in a dictionary.*

Description

Use much like length(list()) or length(c(1, 2, 3)).

Use much like length(list(1, 2, 3)) or length(c(1, 2, 3)).

---

list.py	*Creates an instance of a list*

Description

This is a wrapper function around the pylist$new that is a little more R friendly.

Usage

```
list.py(...)
```

Arguments

... a series of values seperated by a comma. NOTE: a vector will be treated as
an individual item. i.e. list.py(1:100) will yield a list with 1 item, whereas
list.py(1, 2, 3, 4) will yield a list with 4 items

Examples

```
x <- list.py(1, 2, 3, 4)
#[1, 2, 3, 4]
```

---

merge.list	*Function that takes 2 lists and merges them fairly effeciently*

Description

Function that takes 2 lists and merges them fairly effeciently

Usage

```
merge.list(x, y = NULL, mergeUnnamed = TRUE, ...)
```

Arguments

x	a list
y	a second list
mergeUnnamed	boolean for whether or not to include list items with no names
...	whatever else you've got

---

paste	*Turns a list into a printable string*

Description

Generic function that calls the toString method for a list.

---

plot	*Plots a scatterplot of the items of a list.*

Description

Generic function that plots a scatterplot of the items in a list.

---

sapply	*Wrapper around* sapply.

Description

Automatically invotes sapply on the items in the list.

---

sign *Calculates the sign of the items in a list*

Description

Generic function for caclulating the sign of the items in a list. If an item is not numeric an error occurs.

---

sin *Calculates the sin of the items in a list*

Description

Generic function for caclulating the sin of the items in a list. If an item is not numeric an error occurs.

---

sum *Calculates the sum of the items in a list*

Description

Generic function for caclulating the sum of the items in a list. If an item is not numeric an error occurs.

---

summary *Creates a summary of the items in a list.*

Description

Sumamrizes the list by data type. Each data type gets it's own summary with the results put into a native R list.

---

toString *Turns a list into a string.*

Description

Generic function that calls the string method for a list.

---

zip.dict *Combine 2 lists into a dict of key/values*

Description

Takes 2 lists and converts them into a key => value mapping, which takes the form of a `dict.py`.

Usage

```
zip.dict(x, y)
```

Arguments

x	a list, vector, or list.py
y	a second list, vector, or list.py

Examples

```
x <- list.py(1, 2, 3)
y <- list.py("a", "b", "c")
zip.dict(x, y)
#{1: 'a', 2: 'b', 3: 'c'}
zip.dict(y, x)
#{'a': 1, 'b': 2, 'c': 3}
```

---

zip.tuple *Combine 2 lists into a list of lists*

Description

Return a list of 2 item lists, where each list contains the i-th element from each of the argument sequences. The returned list is truncated in length to the length of the shortest argument sequence.

Usage

```
zip.tuple(x, y)
```

Arguments

x	a list, vector, or list.py
y	a second list, vector, or list.py

Examples

```
x <- list.py(1, 2, 3)
y <- list.py(4, 5, 6)
zip.tuple(x, y)
#[[1, 4], [2, 5], [3, 6]]
y <- list.py("a", "b", "c")
zip.tuple(x, y)
#[[1, 'a'], [2, 'b'], [3, 'c']]
```
